Time Period: 2024/09/07 - 2025/09/07 | Report Date: 2025-09-07

About FinCrimeExpert

We are a dedicated team of financial crime specialists who help keep the banking and business world safe. Our mission is to stop illegal activities like money laundering, fraud, and scams before they cause harm.

By bringing together top experts and the latest tools, we provide the resources and connections needed to fight modern cybercrime. We believe that by sharing knowledge and staying alert, we can protect people's money and build a more honest financial system for everyone.

Technology Partner – ThreatWatch360

At **ThreatWatch360**, we provide a comprehensive security platform built to defend your company's digital footprint from every angle. We specialize in finding and stopping phishing, cyber fraud, and fake websites before they can trick your customers or damage your reputation. Our system also tracks rogue apps and social media imposters to ensure your brand stays authentic and secure at all times.

A core part of our defense includes deep dark web monitoring to identify leaked credentials and compromised accounts before they can be exploited by criminals. When a threat is detected, our fast takedown support steps in to remove malicious content and minimize risk immediately. By combining constant monitoring with strong enforcement tools, we help you protect your most valuable digital assets. Our goal is to provide the high-level intelligence needed to maintain a safe online environment for your business. Ultimately, we empower you to build lasting trust with your audience while we handle the complexities of modern cyber threats.

How we identify brand threats

ThreatWatch360 uses a multi-layered cyber threat intelligence methodology to discover, analyze, and mitigate threats targeting your brand across the internet.

Threat Surface Discovery

We map your brand's external attack surface across domains, apps, and social platforms to identify potential abuse points.

Intelligence Collection

Threat data is gathered from the clear web, deep web, dark web, domain registries, and social platforms.

Threat Pattern Detection

Suspicious patterns such as typosquatting domain phishing infrastructure, and credential leaks are identified.

Threat Correlation

Multiple threat signals are analyzed to filter false positives and highlight real risks.

Risk Assessment

Each threat is evaluated based on severity, credibility, and potential business impact.

Actionable Intelligence

Findings are delivered as structured insights to help security teams investigate and respond quickly.

Brand Profile

This section summarizes the organization for which the Domain Reputation Intelligence Report has been generated.

Company Name	WOLFX Digital Agency
Primary Domain	wolfxdigital.com
Country	India
Language	English
Report Date	12 March 2026

Business Description

WOLFX Digital Agency is a full-service digital agency specializing in UI/UX design, website development, and mobile application development. The company helps startups, enterprises, and growing businesses build modern digital products that deliver seamless user experiences and strong brand presence.

Its services include custom website development, e-commerce solutions, CMS platforms, API and backend development, and cross-platform mobile applications. WOLFX combines user-centric design, scalable engineering, and data-driven strategies to create high-performance digital solutions tailored to business goals.

From concept and design to development and deployment, WOLFX focuses on building secure, scalable, and visually engaging digital experiences that help organizations grow in an increasingly digital world.

The following Brand CTI Report presents critical findings detected by ThreatWatch360.

This report highlights how your organization is exposed to phishing domains, credential leaks, impersonation attempts, and suspicious DNS or SSL changes. To uncover these risks, our system continuously monitors the open web, dark web forums, data breach repositories, and major social media platforms for brand misuse.

We strongly recommend using these insights to strengthen your defenses. ThreatWatch360 provides real-time alerts, detailed intelligence, and remediation guidance to help you protect your brand, customers, and digital assets before threats escalate.
